Date: 01/8/26 Packet capture tool - wireshark

Aim:-

To study the wireshark analysis and capture filter and analyze network packets.

Wireshark is a free and open-source network protocol analyzer. It captures packet traveling through a network and display them in a readable format.

It provides filters, colour coding and various features to inspect individual packets analyse network traffic

Procedure:

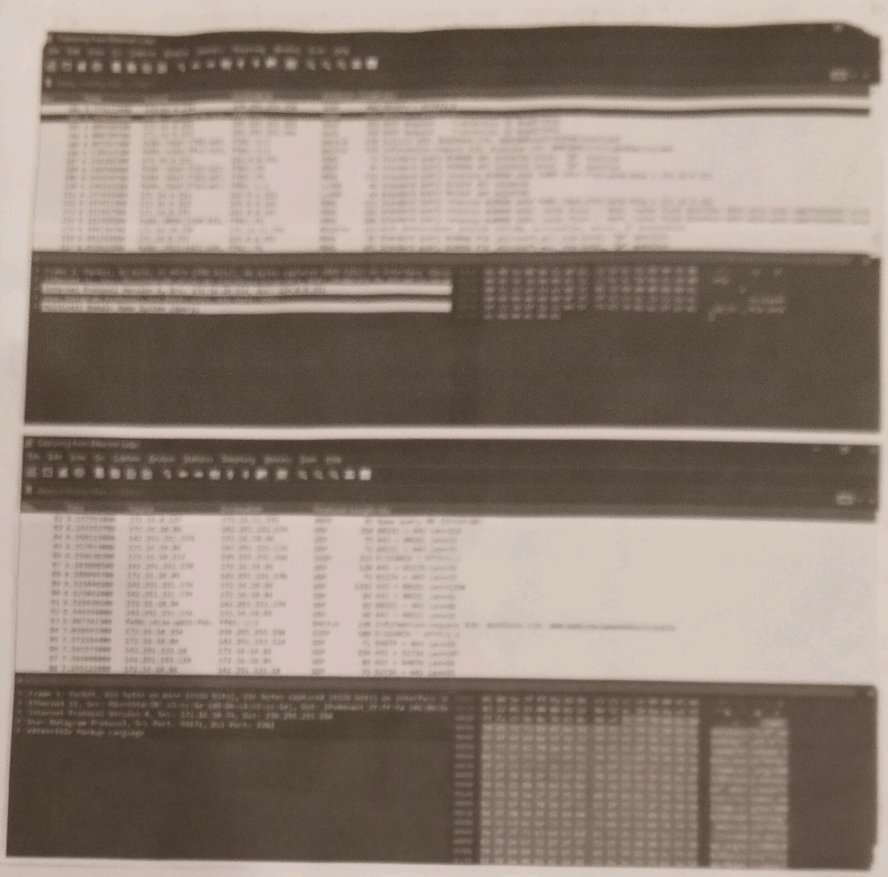

1) Open wireshark and select local area connect.

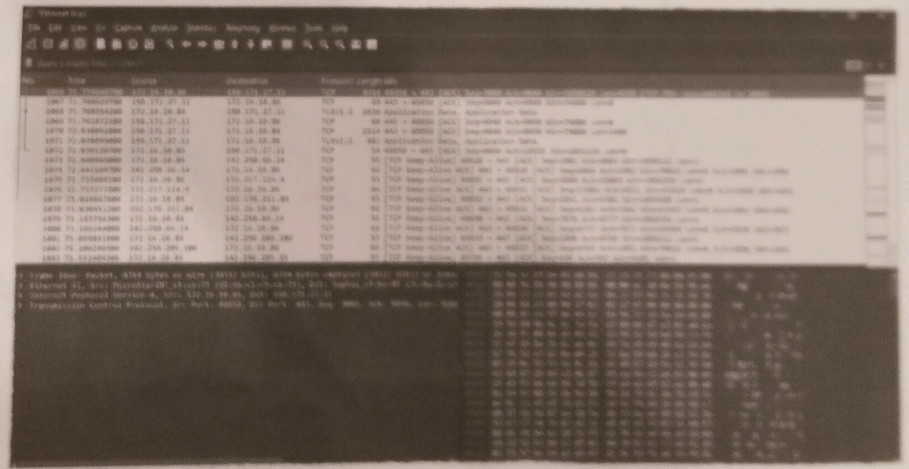

2) Go to capture - options and set the capture to 100 packets.

3) Click start capture and capture the network packets.

4) Use the display filter / search bar to filter required packet such as TCP / UDP APP DNS, HTTP, IP / Icmp and DHCP

5) Inspect the details of the filtered packets.

6) For TCP/UDP and DNS select statistics flow graph to observe packet flow.

7) Save the captured packets after each filtering.

Result:-

Thus the Wireshark packet capture tool was used to capture filter and analyze network packets. The TCP/UDP, ARP, DNS, HTTP, IP/Icmp and DHCP packets were successfully filtered and inspected.
